

This is nothing more than a poorly disguised attempt at censorship. XM radio has the ability to bring rapid, concise local weather and road conditions to truckers and other drivers no matter where they are. Much safer than trying to find a local radio station that could give you the same information, but not as complete. This would be especially valuable service in those areas where local reception is practically non-existent. This bill should be soundly defeated. Since you pay for the service, you should be able to get anything you want on it without some outside group dictating what you can or can not listen to!
